$z = e^{it}$ ($0 \leq t < 2\pi$) とおくと, $dz/dt = ie^{it}$ なのので, $dz = izdt$.

$$\begin{aligned}\oint z^k dz &= i \oint z^{k+1} dt \\ &= i \oint e^{(k+1)it} dt \\ &= \frac{i}{(k+1)i} [e^{(k+1)it}]_0^{2\pi} \\ &= 0\end{aligned}$$

$$\begin{aligned}\oint \frac{1}{z} dz &= i \oint dt \\ &= i [t]_0^{2\pi} \\ &= 2\pi i\end{aligned}$$
